Allowable Subject Matter

Based on an indication of allowable subject matter in claims 8 and 15, Applicant has amended claims 1 and 9 respectively to include these limitations. Claims 16-18, 21-22, and 30 were deemed allowable previously and are still considered to be allowable.

Claims 8 and 15 had further limited claims 1 and 9 by stipulating that one of several organic compounds be employed as a solvent in the claimed methods. Ordinarily, the employment of a specified solvent would not likely represent a foundation for patentability but, in this case, the Examiner believes that this limitation provides a patentable distinction because (i) the gel disclosed in the reference is water based and (ii) the catalyst being used to create an acid gel breaker is an enzyme. Certainly, it would not be obvious to fully replace the water medium with one of the solvents presently mentioned in the independent claims as the enzyme would probably be left in an inoperable non-native conformation, if not rendered completely insoluble. Further, it could not be ascertained why one of ordinary skill would have been motivated to add any of these materials even in smaller amounts that may not adversely impact the activity of the enzyme.

An updated survey of the prior art did not yield any references more germane than those already made of record in Applicant's Information Disclosure statements and the Examiner's 892 forms. Accordingly, claims 1-4, 9-11, 16-18, 21-22, and 30 are allowable.
